Rocket® TRUcentrix

Further Engage Your Partner Community and Integrate the Flow of Information from Your Existing Corporate Systems

Managed File Transfer

Web-based managed file transfer solution

Simple, branded user interface

No file size limits

Configurable transaction expiration period

Transaction audit trail

Custom metadata options

Optional approval process

Document Control

Read only document libraries for secure distribution of product specifications, standards, and other supplier documents

Document libraries with controllable attributes

Searchable document repository

Real time tracking of the approval process

Are You Looking to:

❖ Securely extend your business processes to your suppliers, customers, and other partners?

❖ Monitor project status in real time and maintain easy access to important documents?

❖ Increase levels of process automation with rules-based workflow routing and detailed audit trails?

❖ Increase security, see real time status updates, improve team productivity, and reduce operational costs?

Comprehensive Collaboration and Process Automation Solution

Rocket® TRUcentrix™ is a comprehensive collaboration and process automation solution that streamlines data exchange and collaboration scenarios across corporate IT boundaries. From simple Managed File Transfer (MFT) transactions to complex multi-organizational workflows, TRUcentrix provides a single, secure and proven B2B platform that offers rapid return on investment.

The versatility of TRUcentrix makes it an ideal solution for joint venture partner collaboration, supplier quality management such as Supplier Corrective Action Requests and RFQ automation. Its security and administrative framework ensures easy compliance with International Traffic in Arms Regulations (ITAR) and other information security/privacy laws. Security also extends to integration, as TRUcentrix can be safely connected to existing LDAP user directories like Active Directory, or enterprise applications such as Enterprise Resource Planning (ERP) and Product Lifecycle Management (PLM) systems. Enterprise data access and consistency can be achieved without directly connecting remote users to these sensitive internal applications. In addition, TRUcentrix can be accessed from any mobile device so your team can stay connected.

Simple Online Collaboration and File Sharing

In only minutes, a secure project area can be created with its own unique folder hierarchy, user membership and access permissions. Users can share files of any size or type, track revisions, post discussion threads and manage action items in a safe online environment; TRUcentrix is built on a security framework developed for major U.S. defense contractors.

Robust Document Management

TRUcentrix is a scalable and affordable collaboration solution that can handle all of your complex file sharing and revision tracking. Easily grow from a single department to an entire enterprise. You can define your own document record types and associated workflows to establish proper document categorization and approval processes. Information is securely centralized, organized and backed up and accessible anytime, anywhere. TRUcentrix also supports bulk importing of existing legacy documents without losing metadata and revision history.

Rapid Business Process Automation

TRUcentrix can turn your static forms and written procedures into dynamic, workflow driven eForms. TRUcentrix eForms provide for rapid data and document collection, with an ability to populate data

Rocket.

fields via "look-ups" from existing data sources. This flexible engine allows administrators to set specific automated business rules to eForms for routing of data and document visibility as well as revision rights in real time.

Secure Search and Reporting

Documents uploaded to the TRUcentrix server are indexed by a full text search engine, which helps users to decrease time spent searching for information and more time leveraging it. TRUcentrix also supports sharing saved searches and reports with your team, filtering out or including specific data based on individual user rights. This data can be displayed in list or chart view and can be downloaded in .CSV or .XML format for further manipulation or data exchange.

Flexible Action Item Management

The TRUcentrix Task Manager module offers a simple yet powerful alternative to complex project management software with its webbased spreadsheet user interface. TRUcentrix Task Lists can be created rapidly to track almost anything to completion—enter tasks manually or standardize repetitive tasks by creating re-usable task list templates.
